

Allocations & Outcomes

EASY FORM BUILDER

You can build and modify your own forms quickly and easily without learning a complex computer language. The size of each form and number of forms are not limited.

FORM TYPES

Andar supports the form types necessary for a comprehensive data collection. Form types include:

- Survey Forms: Question & answer data collection
- Financial Forms: Table form collection of financial data
- Demographics: Number of constituents served
- Logic Model: Specific pages to enter logic model components
- Document Upload: Any document can be uploaded

EASY PACKAGING

Any number of forms can be grouped into “packages” and assigned to a specific set of agencies and/or programs. Each package has its own due date. Packages and their completion status by the agencies can be monitored on your dashboard. Agencies can print, or export to spreadsheet, any individual form or the entire package.

FUNDING STRATEGIES

Whether you have a three year funding cycle or fund annually, or both, Andar can manage your process. You can also fund programs based on your impact agenda, initiatives, or as a traditional allocation process.

STRUCTURING

Agencies and programs can be structured or organized in hierarchical structures for easy navigation, monitoring, and reporting.

LOGIC MODEL

Components of the logic model can be entered by agencies through an easy to use web site. The logic model can be printed by the agency. Logic Model components include:

- Inputs into the program
- Activities (related to Outcomes)
- Outputs from Activities
- Outcomes
- Outcome Indicators with Measurements and associated text

COMMUNITY IMPACT

Each impact area can have its own package of forms with area-specific forms and requirements. You can align your funded programs to your organization’s desired community outcomes and you can specify community indicators that should be used to measure achievement of the outcomes. Community indicator measurements can be aggregated across all programs in an impact area as well as year over year.

ONLINE EVALUATIONS

Your volunteers can be assigned programs to evaluate online. Each program can be scored based on any number of criteria. The evaluator can be provided with the agency’s specific application material required for each score.

WORKSHEETS

Andar’s worksheet feature aggregates information from various forms onto one worksheet so staff and volunteers can work together in the allocation decision process.

REPORTING

Canned reports provide flexible and easy data analysis. Agency and program information is also available through Andar’s data mining function and can be combined with any other data such as campaign results or designations to expand data analysis beyond canned reports. More advanced users can take advantage of the Executive Plus module to build custom queries to present charts and other visual data on dashboards or on the website — to keep your community informed about your impact.

EASY FOR AGENCIES

Agencies applying in multiple funding areas don’t need to complete duplicate forms. Completing the form for one funding area automatically completes the same form in the other areas. Agencies can easily copy information from prior year fund applications into the current application.

RELATIONSHIPS

The Allocations & Outcomes module is fully integrated into Andar’s CRM functions. All conversations between agencies and Community Impact, Agency Relations, Accounts Payable, or Campaign staff are centrally recorded. Your agencies and their staff interact with your organization in many ways. All those touch-points are documented and logged in Andar so everyone on staff can collaborate on building the relationships.

COMMUNICATION

Andar’s e-mail system can be used to send funding application invitations and reminders to agencies. Also, Andar’s MSOutlook Connector integrates your Outlook with Andar so all correspondence can be logged.
