

# Apple Pay for Andar e-Pledge

Product enhancements are a critical aspect of all software solutions. Enhancements not only signify growth for a product, but they (more importantly) make customers' use of the product more productive and enjoyable. At Andar Software, we release product improvements twice a year.

Significant product enhancements require the backing of multiple customers before they are applied to the software. Many customers have expressed interest in the enhancement described below.

**If you see a need for this improvement and would like to support it, [let us know!](#)**

## OVERVIEW

Apple Pay is used to make secure purchases on the web and in stores. The method of payment is simpler than using a physical credit card. Read more about Apple Pay on the [Apple website](#). Adding Apple Pay to Andar e-Pledge would enable donors to choose it as a pledge type.

## DEVICES

Apple Pay works with Apple devices such as Macs, iPads, iPhones and the Apple Watches.

## BENEFITS

The online payment method is convenient for donors because they don't have to create an account or fill out long forms when making a gift with Apple Pay.

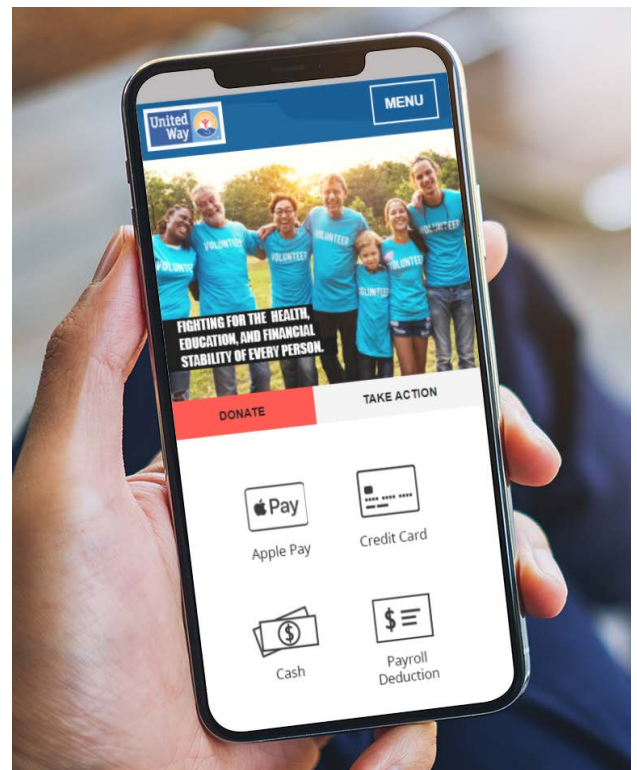

## TECH SPECS

CyberSource is needed to use Apple Pay with Andar e-Pledge. Apple Pay does not process the payment but instead provides a JavaScript API to allow a buyer to pick a credit card from their Apple Wallet. This API is then put together along with the payment amount into a "token." The token is passed back to the e-Community server and submitted to a payment processor such as CyberSource, where the credit card is then charged.

## INVESTMENT

The total cost of implementing Apple Pay is \$52,000. This cost can be shared between multiple customers:

- 5 Customers: \$10,400 Each
- 10 Customers: \$5,200 Each
- 20 Customers: \$2,600 Each
